I am writing to apply for the Business Analyst position at Blockchain.com. Your company's role in connecting millions of users to cryptocurrency and building trusted financial infrastructure is impressive. I am drawn to this opportunity because it sits at the intersection of data analysis, product strategy, and cross-functional execution.

Through my work as a software engineer, I have developed strong analytical skills and comfort working with data to drive decisions. I have built dashboards and reports to track performance metrics, diagnose issues, and identify opportunities for improvement. My experience includes analyzing user activity, conversion patterns, and operational data to support product prioritization and business cases.

One area that particularly interests me is the responsibility to partner with Product and Engineering teams to define requirements, clarify trade-offs, and support delivery of customer-facing features. In my previous roles, I worked closely with stakeholders across product, engineering, and operations to translate business goals into actionable technical specifications. I am comfortable operating in ambiguous environments where the path forward requires structured analysis and clear communication.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical and product-oriented approach can contribute to Blockchain.com's Consumer business.

Sincerely,

Md Shahanur Islam Shagor
