I am writing to apply for the Test Account position at BOT Consulting. My background in full-stack web development and software engineering aligns well with the technical requirements of this role.

Through my professional experience as a Web Developer, I have built and delivered scalable web applications using Laravel on the backend and Next.js with React on the frontend. I have developed RESTful APIs, implemented authentication systems with role-based access control, and integrated secure payment gateways. My work also includes optimizing database queries with Eloquent, implementing caching strategies, and ensuring application performance at scale.

One area that particularly interests me is building responsive, SEO-friendly user interfaces. I have created production UIs using Tailwind CSS, Bootstrap, and Material UI, ensuring they work seamlessly across devices. I have also integrated real-time features such as chat, notifications, and live updates using WebSockets and Pusher, which required careful attention to both frontend and backend coordination.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to BOT Consulting. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
