I am writing to apply for the Senior Quality Engineer role at Tellent. Your focus on building a test automation strategy and expanding end-to-end coverage across Tellent HR aligns with my background in full-stack development and quality-focused engineering.

Tellent's mission to empower HR and People teams with an integrated Talent Management Suite is compelling. The opportunity to work on a platform that serves over 7,000 customers globally and to contribute directly to product quality and customer experience is something I find genuinely interesting.

Through my professional experience as a Web Developer, I have worked extensively with GraphQL APIs and backend services, which directly matches your requirement for API and backend testing proficiency. I have designed and built RESTful and GraphQL APIs using Laravel and Node.js, and I understand the importance of testing these services thoroughly to ensure reliability and accuracy.

In previous work, I have collaborated closely with development teams to embed quality early in the development process. I have experience designing test plans, writing test cases, and working with automation tools to improve software accuracy. My hands-on work with CI/CD pipelines, Docker, and Linux servers has given me a practical understanding of how quality fits into the full development lifecycle.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Tellent's quality engineering efforts.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
