I am writing to apply for the Business Operations Analyst role at TextUs. Your mission to revolutionize business communication through seamless, mobile-first engagement is compelling, and I appreciate the emphasis on using automation and AI to help teams work smarter. I am interested in contributing to a collaborative, data-driven environment where operational efficiency directly impacts customer and stakeholder value.

Through my professional experience building and maintaining full-stack web applications, I have developed a strong foundation in supporting business systems and improving workflows. I have worked with technologies such as AWS, Docker, and CI/CD pipelines to deploy and maintain reliable systems, and I have integrated third-party services and APIs to ensure smooth data flow between platforms. My background in troubleshooting system issues and implementing process improvements aligns with the core responsibilities of this role.

One area that particularly interests me is using AI-powered tools to enhance operational efficiency. In previous projects, I have integrated AI assistants and automation features into applications to streamline reporting, documentation, and workflow tasks. I am comfortable evaluating new technologies and translating business needs into practical, scalable solutions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can support TextUs’s operations and growth. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
