I am writing to apply for the Praktikum Frontend & 3D-Softwareentwicklung position at Think3DDD GbR. Your work combining 3D scanning, software development, and 3D printing to create medical devices for orthopaedic technicians is a meaningful application of technology that I find genuinely interesting.

Through hands-on project development, I have built interactive web applications using React, JavaScript, TypeScript, and CSS. I have experience creating responsive, user-friendly interfaces and optimizing frontend performance. While I have not worked directly with three.js, I have strong foundational knowledge of 3D concepts from my work on computer vision projects involving YOLOv8 and real-time object detection, which required understanding spatial data and coordinate systems.

One area that particularly interests me is building intuitive interfaces for technical users. In previous projects, I developed dashboards and management systems that required clear UX design for non-technical stakeholders. I am comfortable working with measurement tools, markers, and sliders, and I understand the importance of clean, responsive design for a smooth user experience.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the opportunity to contribute to your team and learn more about 3D reverse engineering workflows in the medical technology space. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
