I am writing to apply for the Werkstudent (w/m/d) Customer Care Operations position at IONOS SE. IONOS is a leading European provider of cloud infrastructure and hosting services, and the opportunity to contribute to scaling core services across multiple brands while working with modern AI tools aligns well with my current studies and technical interests.

As a software engineering student with hands-on experience in AI and automation, I have built systems that combine workflow automation with intelligent tools. Through project work, I have integrated OpenAI APIs, built AI assistants, and automated data processing pipelines. I am familiar with the practical side of implementing automation that goes from concept to live operation, which matches the workflow automation focus of this role.

One area that particularly interests me is building and maintaining reports on operational metrics. In my development work, I have created dashboards and monitoring systems that track real-time data and present meaningful metrics to stakeholders. I am comfortable analyzing resources, identifying patterns, and translating data into actionable insights for cross-brand scaling decisions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am currently enrolled in a Bachelor of Software Engineering program and can commit 16-20 hours per week flexibly around my study schedule. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to the Customer Care Operations team at IONOS.

Sincerely,

Md Shahanur Islam Shagor
