I am writing to apply for the Senior Product Owner (w/m/d) E-Commerce position at IONOS SE. As a full-stack engineer with experience building and optimizing e-commerce platforms, I am drawn to IONOS's role as a leading European digitalization partner for small and medium businesses, and I see a strong connection between my technical background and the product ownership responsibilities described in this role.

Through my professional experience as a Web Developer, I have worked extensively with Laravel, Next.js, React, and MySQL to build scalable web applications and online shop systems. I have been responsible for end-to-end feature delivery, from understanding user needs to implementing solutions that improve conversion rates and streamline checkout flows. This technical foundation gives me a practical understanding of what development teams need to build effective e-commerce experiences.

One area that particularly interests me is the translation of complex business and user requirements into clear workflows and product concepts. In my previous role, I regularly collaborated with cross-functional teams including marketing, customer service, and product management to prioritize backlogs and align product direction with business goals. I have experience creating user stories, managing stakeholder expectations, and using data-driven insights to guide product decisions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my combination of technical expertise, product ownership experience, and collaborative working style would allow me to contribute meaningfully to IONOS's e-commerce division. I have attached my CV for your review and look forward to discussing how I can support your team.

Sincerely,

Md Shahanur Islam Shagor
