I am writing to apply for the Clinical Data Manager II / Senior Clinical Data Manager position at Precision for Medicine. While my professional background is in software engineering, I bring strong database development, testing, and data quality management experience that directly supports the responsibilities outlined in this role.

Through my work as a full-stack developer, I have designed and maintained relational databases using MySQL and PostgreSQL, built data entry systems with validation rules, and implemented automated testing pipelines to ensure data accuracy and integrity. These experiences have given me a structured approach to managing data from entry through validation and reporting.

One area that particularly interests me is the emphasis on overseeing data entry quality and developing clear guidelines. In previous projects, I have created data entry workflows, trained team members on proper data handling procedures, and performed quality control checks to maintain consistency. I am comfortable working within defined SOPs and regulatory requirements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in data management and software engineering can contribute to Precision for Medicine’s clinical data operations.

Sincerely,

Md Shahanur Islam Shagor
