I am writing to apply for the Lead Data Scientist position at Brigit. Your mission to help Americans build financial health through transparent, fair products resonates with me, and I am drawn to the opportunity to apply machine learning to real-world problems like credit risk, fraud detection, and transaction optimization.

Through research and development work, I have built and deployed machine learning models in production environments. I developed an AI-powered financial application using Express, MongoDB, and OpenAI, where I trained custom AI assistants on structured datasets and integrated them into a live system. I also built a real-time object detection pipeline using YOLOv8n, Python, and edge hardware, handling the full lifecycle from data collection to model deployment and performance monitoring.

I have experience with Python, SQL, and industry-standard toolkits for modeling and analysis. In my professional work, I have written complex SQL queries, designed database schemas, and built RESTful APIs that serve structured data to frontend applications. I am comfortable working with training data, tuning hyperparameters, running validation, and monitoring model performance in production.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background aligns with the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
