I am writing to apply for the Working Student Founders Associate position at MANUGY GmbH. Your mission to make battery cell manufacturing more flexible, efficient, and sovereign through deep-tech innovation is compelling. As a software engineering student with research experience in autonomous systems and cybersecurity, I am drawn to the intersection of deep technology, manufacturing, and strategic execution that MANUGY operates within.

What stands out to me about this role is the opportunity to directly support founders across fundraising, partnerships, and go-to-market strategy. My background in engineering, combined with hands-on project development, has given me a structured and analytical mindset that fits well with the research and operational demands of this position. I am comfortable preparing investor materials, conducting market analysis, and driving execution across teams.

Through my professional experience as a Web Developer, I have worked closely with stakeholders to translate technical requirements into actionable deliverables. I have prepared documentation, supported decision-making processes, and contributed to operational workflows that required clear communication and cross-team coordination. These experiences have taught me how to operate effectively in environments where both technical depth and business context matter.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to contribute to MANUGY’s mission and grow at the intersection of deep tech and strategy. I have attached my CV for your review and look forward to discussing how I can support your team.

Sincerely,

Md Shahanur Islam Shagor
