I am writing to apply for the Fullstack Softwareentwickler position at TecFox GmbH. Your focus on building scalable, high-quality digital solutions for diverse clients aligns well with my background in full-stack development and microservices-based architectures.

Through four years of professional full-stack development experience, I have worked extensively with Laravel, Next.js, React, TypeScript, and Node.js. I have built and maintained RESTful APIs, designed relational database schemas in MySQL and PostgreSQL, and deployed applications using Docker, Nginx, and CI/CD pipelines on AWS and Google Cloud. I also have hands-on experience with Redis, Socket.IO, and Kubernetes, which supports the microservices-oriented work your team does.

One area that particularly interests me is building scalable systems that balance performance, security, and maintainability. In previous work, I developed a multi-vendor e-commerce ecosystem using Laravel and Flutter, implementing role-based access control, real-time notifications, and secure payment flows. I also built a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which involved live data streaming and containerized deployment. These projects required close collaboration with UI/UX, frontend, and backend teams, as well as participation in code reviews and architectural decisions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to TecFox’s projects. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
