I am writing to apply for the Frontend Softwareentwickler position at TecFox GmbH. Your focus on building modern, high-performance user interfaces and single-page applications aligns with my background in frontend development and my commitment to writing clean, maintainable code.

My professional experience includes over four years of web development, with a strong emphasis on frontend technologies. I have worked extensively with TypeScript, React, and Next.js to build responsive, user-friendly interfaces. I am comfortable with modern frontend architectures and have a solid understanding of best practices for building scalable single-page applications.

One area that particularly interests me is the emphasis on code quality and testing. In my previous work, I have used Jest to write structured unit tests and have consistently focused on delivering robust, well-tested frontend code. I also have experience integrating REST APIs following an API-first approach, ensuring clean separation between frontend and backend layers.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my frontend development skills can contribute to TecFox’s projects.

Sincerely,

Md Shahanur Islam Shagor
