I am writing to apply for the CTO position in Electronics and Product Design of Embedded Monitoring and Automation Systems at HOREICH GmbH. Your focus on developing sensor-based monitoring systems for infrastructure, water management, and bridge monitoring is directly relevant to my technical background and research interests.

Through research and development work, I have built embedded systems that combine C/C++ firmware, real-time data processing, and wireless communication. I have experience programming low-level drivers, network stacks, MQTT, and HTTP services for resource-constrained devices. My work with platforms like Raspberry Pi, ESP32, and NVIDIA Jetson Nano has given me practical insight into the full embedded development lifecycle, from prototyping to deployment.

One area that particularly interests me is the integration of embedded hardware with web-based data platforms. In previous work, I developed a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, and I have built full-stack applications with Laravel and Next.js. This combination of embedded systems knowledge and web development experience allows me to contribute not only to firmware and electronics design but also to the web platform where your customers view and analyze sensor data.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in embedded systems, firmware development, and full-stack engineering can contribute to HOREICH’s product development and technical direction.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
