I am writing to apply for the Security Platform Engineer role at Lumin Digital. Your focus on building secure, reliable platform infrastructure aligns directly with the kind of engineering work I enjoy most.

Through my professional experience, I have built and maintained secure backend systems using Laravel, Node.js, and Express, with a strong emphasis on authentication, role-based access control, and secure API design. I have worked extensively with Linux servers, Docker, Nginx, and CI/CD pipelines to deploy and monitor production applications. My understanding of security extends to practical areas like JWT-based authentication, encrypted data handling, and secure third-party integrations.

One area that particularly interests me is building resilient platform infrastructure. In previous work, I deployed and maintained applications on Linux environments, configured reverse proxies with Nginx, containerized services with Docker, and set up automated deployment pipelines. I also implemented real-time monitoring and logging to ensure system reliability and quick incident response.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in secure platform engineering can contribute to Lumin Digital.

Sincerely,

Md Shahanur Islam Shagor
