I am writing to express my interest in the Innovation role at Doshi Group. The position focuses on creating the strategy and culture for experimentation, which aligns with how I approach technology development.

Through my work as a Full-Stack and AI Engineer, I have consistently built systems that require strategic thinking and cross-functional coordination. Whether designing a multi-vendor e-commerce ecosystem or an AI-powered financial platform, each project involved defining the technical direction, selecting appropriate resources, and enabling team members to experiment effectively.

One area that particularly interests me is building environments where experimentation is supported at the right level. In my professional experience, I have led the architecture of complex systems while ensuring that developers and stakeholders have the tools, clarity, and autonomy needed to innovate. This includes setting up CI/CD pipelines, containerized deployments, and modular codebases that reduce friction and encourage iteration.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in building innovative systems and fostering a culture of experimentation can contribute to Doshi Group.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
