I am writing to apply for the Senior AI Engineer position at Pentadoc Gruppe. Your focus on building production-grade AI systems that solve real operational problems aligns directly with the kind of work I have been doing in recent projects.

Through hands-on development work, I have built AI-powered applications that go beyond simple demos. One example is an AI-powered financial platform where I integrated OpenAI assistants, AWS services (SES, S3, EC2, Transcribe), and real-time data processing into a single production-ready system. The project required designing LLM-powered workflows, handling voice-to-text processing, generating PDF documents automatically, and managing authentication flows â all while balancing cost, latency, and reliability.

Another area of my work involved building an AI-powered real estate platform that used both OpenAI and Replicate APIs. I implemented role-based access, subscription plans, cron job scheduling, and Stripe payment integration. These projects required making architectural decisions about model selection, API orchestration, and system performance under real usage conditions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building and deploying AI systems can contribute to the work at 5Plus.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
