I am writing to apply for the Senior Product Owner position at Flix. Your focus on integrating diverse pricing tools into a cohesive ecosystem and improving user experience within the Revenue Management Products team is a challenge that aligns with my experience in building and shipping complex, user-focused products.

Over the past four years, I have worked as a full-stack developer in collaborative environments where I regularly partnered with stakeholders, engineering managers, and cross-functional teams to define product vision, prioritize backlogs, and deliver features end-to-end. At Explo-IT, I was responsible for designing scalable web applications, building RESTful APIs, and implementing authentication and payment systemsâ work that required constant alignment between business needs and technical execution.

One area that particularly interests me is the emphasis on cross-team product initiatives and resolving dependencies across multiple domains. In my previous role, I collaborated closely with product owners and developers to drive alignment on API design decisions, data pipelines, and system trade-offs. I am comfortable facilitating data-driven decisions and finding a pragmatic balance between speed and quality, whether working within a single team or spanning broader initiatives.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
