I am writing to apply for the Junior DevOps Engineer position at Flix. Your Platform Engineering team's focus on building and operating Kubernetes-based infrastructure on AWS to power scalable travel services across Europe is exactly the kind of environment where I want to grow my skills.

My technical foundation aligns well with the requirements of this role. I have practical experience with AWS, Docker, and containerization, and I have worked with Kubernetes in development and testing environments. I am comfortable with Linux systems, shell usage, and have set up CI/CD pipelines for web applications. I also have experience with monitoring tools like Prometheus and Grafana, which I have used to track system metrics.

In previous work, I deployed and maintained applications on Linux servers using Nginx and Docker, and I automated deployment workflows to improve reliability. I have built and integrated RESTful APIs, which gives me a practical understanding of API infrastructure and how to support engineering teams in using platform services effectively.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Flix's platform engineering team.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
