I am writing to apply for the Senior Platform Engineer, Event Streaming Platform role at Wolt. The opportunity to work on the event streaming backbone that powers critical workflows across Wolt, Deliveroo, and DoorDash is compelling. I have been building and operating distributed systems in production, and this role sits at the intersection of platform engineering and reliability engineering, which aligns with my technical focus.

My experience includes working with Go and Python to build reliable, production-grade systems. I have operated scalable infrastructure, debugged complex distributed systems issues, and improved reliability through automation and observability. I have hands-on experience with Linux, Docker, Nginx, CI/CD pipelines, and monitoring tools such as Prometheus and Grafana. I have also worked with Redis and microservices architectures, which are relevant to building resilient streaming platforms.

One project that reflects this is the Real-Time Server Health Monitoring system I built. It used Node.js, Express, Socket.IO, and Python to stream live system metrics to a dashboard. I implemented role-based access control, JWT authentication, and Dockerized the entire stack for production deployment. This project required debugging latency issues, managing concurrent connections, and ensuring reliable data delivery, which maps directly to the responsibilities of this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in distributed systems and platform engineering can contribute to the Event Streaming team at Wolt.

Sincerely,

Md Shahanur Islam Shagor
