I am writing to apply for the Technischer Werkstudent position at Qentin. The idea of building an AI-powered guide for film and series discovery that moves beyond static genre lists and connects mood, context, and personal preferences is genuinely interesting to me. I appreciate that you are offering direct involvement with the core product from the start, and I am drawn to the prospect of growing into a Founding Engineer role over time.

My background is in full-stack web development with a strong focus on React, TypeScript, and modern frontend frameworks. I have built and shipped production applications using Next.js, Tailwind CSS, and Node.js, and I am comfortable working across the entire stack. I also have hands-on experience integrating AI capabilities into real applications, including training custom AI assistants using OpenAI models and building recommendation logic for user-facing features.

One area that particularly interests me is how you approach film discovery through mood, context, and personal taste. In my own work, I have developed AI-powered features that analyze user input and deliver personalized results. For example, I built an AI assistant for a financial application that processed natural language queries and generated tailored responses. I am confident I can contribute to building recommendation logic and improving user flows for Qentin's discovery experience.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where I can take real ownership, contribute to product decisions, and build something people genuinely enjoy using. I believe Qentin offers that opportunity. I have attached my CV for your review and would welcome the chance to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
