I am writing to apply for the Backend Developer (Python) role at Persohap GmbH. Your focus on building AI-powered coaching and interview experiences aligns with my background in backend engineering and AI integration.

Through my professional experience, I have designed, built, and maintained production backend services using Python, Node.js, and Laravel. I have worked extensively with REST APIs, relational databases like MySQL and PostgreSQL, and have deployed applications on AWS. I am comfortable with Docker for containerization and have used Git for version control in team environments.

One area that particularly interests me is integrating third-party services and AI providers into backend systems. In previous projects, I have built APIs that connect with OpenAI and other AI services, handling data modeling, authentication, and real-time communication. I also have experience with microservices architecture and have worked with tools like Redis and Socket.IO to keep backend systems fast and reliable.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Persohap’s platform.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
