I am writing to apply for the 2nd Level Supporter / IT-Systemadministrator position at YourNetwork ´• Michael Marzahn. The role combines system administration, troubleshooting, and customer support â areas where I have built practical, hands-on experience.

Through my professional work as a Web Developer, I have managed Linux servers, configured Nginx and Apache, deployed applications using Docker, and set up CI/CD pipelines. I have worked with monitoring tools and handled system-level troubleshooting, including backup control, patch management, and performance analysis. These responsibilities align directly with the system administration and support tasks described in your job posting.

One area that particularly interests me is the focus on security and compliance. I have experience implementing authentication systems, role-based access control, and secure configurations in production environments. I am comfortable working with firewalls, VPN concepts, and endpoint security practices, and I approach security incidents with a structured, analytical mindset.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my technical foundation, problem-solving approach, and customer-oriented mindset make me a strong fit for this role. I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
