I am writing to apply for the Frontend Developer (React) role at Persohap GmbH. Building AI-powered coaching and interview experiences that put AI in front of real users is exactly the kind of product-focused engineering work I enjoy. The opportunity to own the frontend and have real impact on what users see aligns with how I approach development.

My professional experience centers on building responsive, accessible user interfaces with React, TypeScript, JavaScript, HTML, and CSS. I have worked extensively with modern build tooling and REST APIs, turning designs into clean, reusable components while keeping the frontend fast and maintainable. I also participate actively in code reviews and value clean, readable code.

In my previous work as a Web Developer, I built and maintained scalable frontends using Next.js and Tailwind CSS, integrated backend APIs, and delivered real-time features using WebSockets. I focused on performance optimization, responsive design, and ensuring a smooth user experience across devices. This role's emphasis on high ownership and shipping quality UI is something I have practiced consistently.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how my frontend experience can contribute to Persohap's products.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
