I am writing to apply for the Systemadministrator position at ITconfig/all GmbH. Your focus on modernizing IT infrastructure through automation and DevOps practices aligns well with my technical background in Linux systems, containerization, and monitoring.

Through my professional experience, I have worked extensively with Linux server administration, including configuring and maintaining Nginx and Apache web servers. I have used Docker for containerized deployments and set up CI/CD pipelines to automate build and release processes. These skills directly support your goal of automating operational workflows and moving toward platform-based infrastructure.

One area that particularly interests me is infrastructure monitoring and reliability. I built a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which tracks availability and latency across multiple endpoints. This project gave me practical experience with Grafana-style observability, live metric streaming, and maintaining stable system operations under load.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can support ITconfig/all GmbH’s infrastructure goals.

Sincerely,

Md Shahanur Islam Shagor
