I am writing to apply for the Senior CRM Manager Data & Automation role at Lyto Brands Group. Your focus on taking full analytical and operational ownership across three brands and three markets is exactly the kind of challenge I want to be part of.

My technical foundation is in full-stack development and automation, with hands-on experience building scalable systems and integrating APIs. I have worked extensively with JavaScript, Python, and HTML, which directly supports the scripting, automation, and templating needs of this role. I am genuinely eager to work with Klaviyo MCP and n8n to automate CRM processes and move toward a fully flow-driven campaign operation.

One area that particularly interests me is building toward a state where no campaign is manually built and sent. In my previous work, I developed an AI-powered financial application that involved automating workflows, integrating third-party APIs, and deploying cloud-based solutions. I also built a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which required designing automated reporting and live data streaming. These experiences have given me a strong foundation in automation logic, API-driven workflows, and data-driven decision making.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Lyto Brands Group’s CRM and automation goals.

Sincerely,

Md Shahanur Islam Shagor
