I am writing to apply for the Founding Product Manager role at Auxilius.ai. Your focus on building AI-native GRC solutions for enterprise customers, combined with the expectation that the first PM will own product end-to-end and work directly with the founding team, is exactly the kind of challenge I am looking for.

What stands out to me about Auxilius.ai is the emphasis on outcomes over features, customer-driven discovery, and the need to become fluent in a regulated domain quickly. As a Full-Stack & AI Engineer who has built AI-powered products from scratch, I am comfortable working at the intersection of product, engineering, and customer needs. I have experience shipping B2B SaaS platforms where I owned the full cycle â from understanding user pain points and defining requirements to building, deploying, and iterating based on real feedback.

In my professional experience, I have worked directly with stakeholders and engineering teams to define product direction, prioritize features based on customer evidence, and deliver measurable results. I have built and integrated AI-powered features using OpenAI and other LLMs, designed scalable backend architectures, and implemented authentication, payment systems, and real-time communication features. This technical foundation allows me to collaborate effectively with engineering teams and make informed product decisions.

I am also comfortable operating without a playbook. I have built systems from scratch in early-stage environments, set up development workflows, and made product decisions under ambiguity. I learn complex domains quickly and enjoy the process of becoming fluent in new regulatory or technical areas. I am fluent in English and Bengali, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my product and engineering experience can contribute to Auxilius.ai’s growth.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
