I am writing to apply for the Product Engineer*in / Fullstack Developer*in position at myProtectify. The mission behind Maya, an anonymous AI support chat for those affected by domestic violence, is genuinely meaningful. I am interested in contributing to a product where technology directly supports people in vulnerable situations.

My professional background combines full-stack development with practical AI integration. I have built and deployed web applications using React, Next.js, TypeScript, and Laravel, and I have worked with OpenAI APIs to create intelligent assistants within production systems. This aligns with your need for someone who can develop the React frontend, connect it with services like Botpress, and think critically about when to use low-code versus custom development.

In previous work, I have taken end-to-end ownership of features from technical conception through implementation, testing, and deployment. I have connected databases, APIs, and internal systems to build scalable and reliable applications. I am comfortable working directly with UX and product teams to translate requirements into working technical solutions, and I prioritize stability, security, and maintainability in everything I build.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the opportunity to discuss how I can contribute to Maya’s development as a long-term member of your team. My CV is attached for your review.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
