I am writing to express my interest in joining the Easygo Talent Community. Easygo's reputation for building high-velocity tech products like Stake, KICK, and Easygo Games is well known, and I appreciate the focus on creating an environment where people can grow and deliver real impact.

My background is in full-stack web development and AI engineering. Over the past four years, I have worked extensively with Laravel, Next.js, React, TypeScript, Node.js, and MySQL to build scalable web applications. I have also worked with Docker, Linux servers, and CI/CD pipelines for deployment and infrastructure management.

In my professional experience, I have designed and developed RESTful APIs, implemented role-based authentication, integrated payment gateways, and built real-time features using WebSockets. I have also optimized database queries and caching strategies to improve application performance.

One project that reflects my approach is the Multivendor E-commerce Management Ecosystem, where I built a Laravel backend with role-based access control, MySQL, and Flutter mobile apps. The system coordinated customers, sellers, and delivery agents through a unified API layer.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to connect when a role that matches my skills becomes available.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
