I am writing to apply for the IT-Systemadministrator (m/w/d) position at connect people & company GmbH, supporting the IT team at Gefl^…gelspezialit^ten Steinfeld GmbH & Co. KG. The opportunity to work on modern IT infrastructure in a company that values transparency and innovation is something I find genuinely interesting.

My background includes practical experience with Linux server administration, Docker containerization, and cloud platforms such as AWS and Google Cloud. I have worked with Nginx and Apache for web server configuration, set up CI/CD pipelines for automated deployments, and used monitoring tools to maintain system reliability. These skills align well with the responsibilities of administering and developing server environments.

One area that particularly interests me is the administration of virtual server environments and ensuring reliable backup and recovery processes. In previous work, I built a real-time server health monitoring dashboard that tracked system metrics and availability using Node.js, Socket.IO, and Docker. This project gave me practical experience in monitoring, troubleshooting, and maintaining server operations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your IT team.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
