I am writing to express my interest in having my candidate profile transferred from CyberCX to Accenture Australia's Workday recruitment platform as part of the transition of recruitment activities.

My background spans full-stack web development, AI engineering, and cybersecurity research. I have professional experience building scalable web applications with Laravel, Next.js, React, and Node.js, along with hands-on work in API development, authentication systems, and database optimization. I also hold a research focus on secure UAV systems, decentralized communication protocols, and privacy-preserving technologies.

One area that aligns well with Accenture's work is my research on OmniGuard V2X, a privacy-preserving blockchain framework for autonomous vehicle networks. This project involved implementing Zero-Knowledge Proofs and post-quantum cryptography to secure vehicle-to-everything communication. Through this work, I gained practical experience in designing resilient, decentralized security architectures.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I welcome the opportunity to be considered for roles at Accenture that match my skills and career aspirations.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
