I am writing to apply for the Chief of Staff role at dnl. Your work in translating complex audit workflows into structured, AI-driven systems is exactly the kind of challenge that interests me. I have spent my career building intelligent software solutions, and I see a strong connection between your mission and my experience in engineering, AI, and cross-functional execution.

Through my professional experience as a full-stack and AI engineer, I have developed a deep understanding of how technology can transform professional workflows. I have built AI-powered applications from the ground up, including a financial platform that integrates OpenAI, AWS services, and real-time data pipelines. This work required me to think beyond code and focus on how systems deliver real value to users, which is the same mindset dnl brings to audit technology.

One area that particularly interests me is the operational side of this role. In my previous work, I have coordinated across product, engineering, and business teams to deliver complex projects on time. I am comfortable preparing decision-ready analyses, managing stakeholder relationships, and building processes that keep teams aligned. I take a hands-on, high-ownership approach to every project I lead.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the opportunity to contribute to dnl’s growth and help shape how audit teams work more efficiently through intelligent systems. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
