I am writing to apply for the Senior AI Product Manager role at Predium Technology GmbH. What Predium is building â an AI analyst that replaces manual Excel-based workflows for asset managers and credit officers â directly aligns with the kind of product work I find most meaningful. The opportunity to define and ship an AI-native product in a domain where decisions still rely on outdated tools is exactly the challenge I want to take on.

AI is not a side interest for me; it is how I build. I use LLMs, agents, and tools like Cursor and Claude as part of my daily workflow. Through hands-on development of AI-powered platforms, I have worked with OpenAI APIs, Replicate for image processing, and custom-trained assistants. I have dealt with the real challenges of AI product development: managing latency, evaluating model outputs, handling hallucinations, and designing effective human-in-the-loop workflows. I understand that shipping an AI product means more than integrating a model â it means building something customers trust and actually use.

In my professional experience as a Web Developer at Explo-IT, I worked end-to-end on digital products. I collaborated directly with stakeholders to understand pain points, defined what to build and why, and iterated quickly based on real feedback. I built scalable applications with Laravel and Next.js, integrated RESTful APIs, implemented authentication and payment systems, and deployed on Linux servers. I am comfortable moving fast, making decisions with incomplete information, and taking ownership of outcomes rather than waiting for detailed specifications.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how my background in AI-powered product development and end-to-end digital product delivery can contribute to Predium’s next phase.

Sincerely,

Md Shahanur Islam Shagor
