I am writing to apply for the Senior Backend Engineer position at bits&birds GmbH. The focus on technical ownership, architectural responsibility, and long-term client partnerships aligns with how I approach software engineering.

My backend development work has been built around Node.js and TypeScript, where I have designed and maintained scalable services for production environments. I have worked with Express.js and NestJS to build RESTful APIs, implemented secure authentication systems, and managed relational databases like MySQL and PostgreSQL. On the infrastructure side, I have deployed and operated applications on AWS using EC2, S3, and SES, and I am comfortable working with Docker, Nginx, and Linux-based servers.

One area that particularly interests me is the emphasis on end-to-end feature ownership and close collaboration with clients and domain experts. In my professional experience, I have taken features from initial requirement analysis through implementation, testing, and deployment. I have also contributed to code quality through reviews, refactoring, and continuous improvement of existing systems. I value clean architecture and pragmatic decision-making, especially when working on complex, business-critical services.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the work at bits&birds GmbH.

Sincerely,

Md Shahanur Islam Shagor
