I am writing to express my interest in the Steuerberater (m/w/d) position at Taxtalente.de for a partner firm in Gotha. While my professional background is in software engineering rather than tax consulting, I bring a strong foundation in digital process optimization, secure system architecture, and data management that aligns well with a modern, digitally-driven tax firm.

In my professional experience as a Web Developer, I have built and maintained scalable web applications using Laravel, Next.js, and MySQL. I have implemented authentication systems, role-based access control, and secure payment gateways. I have also worked with Docker, Nginx, and cloud platforms like AWS for deployment and server management. These skills translate directly to supporting digital workflows and modernizing operational processes in a tax advisory context.

One area that particularly interests me is the emphasis on digital tools and modern infrastructure mentioned in your job description. I have experience integrating third-party services, building real-time features, and optimizing database performance. I am comfortable working with Linux servers, CI/CD pipelines, and cloud environments, which would support a seamless transition to a digitally advanced workplace.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical skills could contribute to your partner firm in Gotha.

Sincerely,

Md Shahanur Islam Shagor
