I am writing to apply for the Founding AI Engineer Retrieval and Knowledge Layer role at Lokalaise GmbH. Your mission to build local AI infrastructure for companies that cannot move sensitive knowledge into cloud systems is both timely and technically compelling. The idea of deploying AI inside customer-controlled environments with secure connectors, permission-aware retrieval, and audit trails directly matches the kind of practical, privacy-first engineering I want to work on.

My background combines full-stack development with applied AI engineering. Over the past year, I have worked on multiple projects that involve integrating AI models, building secure APIs, and deploying systems in production environments. I have used Python extensively for AI-related work, including object detection pipelines with YOLOv8n, real-time data processing with Flask, and automation workflows. I am comfortable working with open-source AI frameworks and deploying models in environments where data privacy and offline functionality are critical.

One area that particularly interests me is building secure connectors and retrieval systems that respect permissions and maintain audit trails. In my project work, I have designed systems that handle authentication, role-based access control, and real-time data streaming. For example, I built a real-time server health monitoring dashboard using Python, Flask, and Socket.IO that streams live metrics to connected clients, ensuring visibility without compromising security. I have also worked with Docker, Nginx, and Linux servers to deploy and maintain production systems in controlled environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to contribute to Lokalaise as a founding engineer, helping turn early deployments into a repeatable product while working hands-on with the founders. I have attached my CV for your review and look forward to the possibility of discussing how I can support your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
