I am writing to apply for the SAP Security Berater position at GoToSec GmbH. Your focus on SAP security, identity and access management, and sustainable, long-term solutions for clients is exactly the kind of environment where I want to contribute.

Through my work in software engineering and cybersecurity, I have developed a strong foundation in access control, authentication, and secure system design. I have implemented role-based access control (RBAC) in production applications, built secure authentication flows using JWT and OAuth, and worked with encryption protocols to protect data integrity. My experience includes designing systems that enforce segregation of duties and audit compliance, which directly relates to the core responsibilities of this role.

In previous projects, I have independently analyzed security requirements, identified optimization potential, and delivered solutions that improved system reliability and compliance. I am comfortable working with structured processes, monitoring access permissions, and ensuring that security concepts are implemented correctly. My technical background in Linux, Docker, and deployment pipelines also supports the operational side of security consulting.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can support GoToSec GmbH in delivering high-quality SAP security solutions.

Sincerely,

Md Shahanur Islam Shagor
