I am writing to apply for the Testing Testing Test position at Gold Standard. Your organization's mission to drive high-integrity climate action and sustainable development through rigorous standards and transparent practices is genuinely compelling. I am interested in contributing my technical skills to support your impactful work.

My background is in full-stack web development and AI engineering, with over four years of professional experience building and deploying production-grade applications. I have worked extensively with Laravel, Next.js, React, and Node.js, and have delivered projects that include real-time features, role-based access control, payment integration, and third-party API connectivity. I am comfortable working across the entire stack, from database design and API development to responsive frontend implementation and server deployment.

In my recent role as a Web Developer, I designed and built scalable web applications using Laravel for backend logic and Next.js for modern, SEO-friendly frontends. I integrated RESTful APIs, implemented authentication and authorization systems, and optimized database performance through query tuning and caching. I also deployed and maintained applications on Linux servers using Docker and Nginx, and set up CI/CD pipelines for smoother releases.

One project that reflects my approach is the Multivendor E-commerce Management Ecosystem, where I built a full-stack marketplace platform with a Laravel backend, role-based access control, and multiple Flutter-based mobile apps for different user roles. The system handled complex workflows including order management, real-time notifications, and logistics coordination, all while maintaining performance and reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to Gold Standard's mission. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
