I am writing to apply for the Operator Red days position at Princes Group. With a background in software engineering and a focus on building reliable, production-grade systems, I am interested in contributing to the operations team at a company known for responsibly sourcing and manufacturing food and drink products enjoyed by consumers every day.

In my professional experience as a Web Developer, I have worked extensively with Linux servers, Docker, Nginx, and CI/CD pipelines to deploy and maintain applications in production environments. This has given me a practical understanding of system monitoring, uptime management, and operational workflows. I am comfortable working in onsite settings and following structured processes to ensure consistent and reliable outcomes.

One area that particularly interests me is the operational scale at Princes Group. With over 7,000 employees and multiple production sites, maintaining smooth day-to-day operations requires attention to detail, reliability, and the ability to follow procedures accurately. My experience managing server health, database performance, and real-time monitoring aligns well with the operational focus of this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in operations and systems can support the team at Princes Group.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
