I am writing to apply for the SCL Agent position at Skanska Costain STRABAG Joint Venture. While the role is centered on tunnels and routeway construction management, I bring a background in full-stack development and AI engineering that can support digital operations and workflow systems in large-scale infrastructure projects.

Through my professional experience as a Web Developer, I have built and maintained scalable web applications using Laravel, Next.js, and React. I have developed RESTful APIs, implemented authentication and role-based access control, and integrated real-time features using WebSockets. These skills are directly applicable to building and maintaining digital tools that support construction management workflows.

One project that demonstrates my ability to build practical, real-time systems is the Real-Time Server Health Monitoring dashboard. I developed a full-stack platform that streams live system metrics to the browser using Socket.IO, with role-based access control and a fully Dockerized production setup. This experience in building monitoring and alerting systems could be valuable for tracking equipment, personnel, or environmental conditions in a tunnel construction environment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical background can contribute to the SCL Agent role and the broader objectives of Skanska Costain STRABAG Joint Venture.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
