I am writing to apply for the Agent position at Skanska Costain STRABAG Joint Venture. The role within the Structures & Earthworks division of a major infrastructure joint venture is of strong interest to me.

Through my professional experience as a Web Developer, I have built and maintained scalable web applications using Laravel on the backend and Next.js on the frontend. I have developed RESTful APIs, implemented authentication systems, and worked with MySQL databases to ensure reliable data handling. My work has involved deploying applications on Linux servers using Nginx and Docker, and setting up CI/CD pipelines for consistent delivery.

One area that particularly interests me is building systems that require coordination across multiple components. In previous projects, I have integrated real-time features using WebSockets, implemented role-based access control, and optimized application performance through query tuning and caching strategies. These skills translate well to managing complex workflows in a construction management environment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the needs of your team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
