I am writing to apply for the Senior QA Engineer - Payments role at Distribusion Technologies. Your platform connects millions of travelers with ground transportation across 70+ countries, and ensuring top-notch quality in payment flows and production features is clearly central to your mission. I find the challenge of building automated test frameworks and preventing bugs that affect sales and critical functionality genuinely compelling.

Through my professional experience as a Web Developer, I have developed and tested RESTful APIs, integrated third-party services, and worked with microservices architectures. I have used JavaScript, TypeScript, and Jest for test automation, and I am comfortable with CI/CD pipelines, Docker, and Linux server environments. I also have experience with PostgreSQL for data validation and debugging at the database level.

One area that aligns well with this role is my work on the AI Powered Financial App, where I built the backend API using Express, TypeScript, and MongoDB, integrated AWS services for authentication and document generation, and ensured reliable data flow across distributed components. This project required careful testing of API endpoints, authentication flows, and third-party integrations to maintain production stability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in software engineering and quality assurance can contribute to Distribusion’s growing platform.

Sincerely,

Md Shahanur Islam Shagor
