I am writing to apply for the Prozessentwickler position at cigus GmbH. Your focus on precision cleaning processes for optical components and automated system validation caught my attention. While my formal training is in software engineering, I bring a structured, process-oriented approach to technical problem-solving that aligns well with the responsibilities of this role.

Through my work in software development, I have gained extensive experience in defining, validating, and optimizing automated processes. I have designed systems where reliability, repeatability, and precision are critical requirements. This has given me a strong foundation in process thinking, systematic validation, and continuous improvement methodologies that transfer directly to industrial process development.

One area where I have applied these skills is in building real-time monitoring and automation systems. I have developed architectures that require careful process definition, validation against specifications, and ongoing optimization based on production feedback. This experience has taught me to approach technical challenges methodically, document processes clearly, and ensure smooth handoffs between development and production teams.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my process development and automation experience could contribute to your team at cigus GmbH.

Sincerely,

Md Shahanur Islam Shagor
