I am writing to apply for the Softwareentwickler Embedded C++ (m/w/d) position at ASTRUM IT GmbH. Your focus on developing software for medical imaging in an agile Scrum environment aligns well with my technical background and interest in building reliable, high-performance systems.

Through my academic and project work, I have developed strong proficiency in C++ and Linux system development. I have experience working with embedded systems, writing efficient code, and performing thorough testing and debugging. My work has involved designing modular software components, implementing unit and integration tests, and ensuring code quality through systematic review processes.

One area that particularly interests me is the hardening and security aspect of embedded systems. I have practical experience with Linux system administration, OS updates, and security best practices. I am comfortable working with existing codebases, understanding their architecture, and contributing to their improvement while maintaining stability and performance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my C++ and Linux expertise to your medical imaging project and grow within ASTRUM IT’s collaborative and innovative environment. I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
