I am writing to apply for the Senior AI Architect & Consultant role at MAI Group. The opportunity to design and bring productive AI systems to life for regulated industries aligns directly with the kind of engineering work I pursue.

Through research and development work, I have built production-oriented AI systems that integrate LLMs, computer vision, and backend services. One example is an AI-powered financial application where I developed the API using Express, TypeScript, OpenAI, and AWS, and implemented AI assistants trained on custom datasets. Another project involved an AI real estate platform where I integrated Replicate API for image processing and Stripe for payments, with role-based access control and subscription management. These experiences have given me practical understanding of architecting AI solutions that go beyond prototypes and operate reliably in real environments.

A relevant example of my work with scalable infrastructure is a real-time server health monitoring dashboard I built using React, Node.js, Socket.IO, and Docker. The system streams live metrics to the browser and runs in a fully containerized production setup. I have also worked with Kubernetes, Prometheus, and Grafana for observability, and I am comfortable deploying and optimizing AI workloads on container orchestration platforms.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI engineering and system architecture can contribute to MAI Group’s growing AI portfolio.

Sincerely,

Md Shahanur Islam Shagor
