I am writing to apply for the Unit-Lead SEA / Google Ads position at anocus GmbH. Your focus on helping e-commerce companies reach their full potential through Google Ads and web analytics is a compelling mission, and I appreciate the emphasis on personal development, operational excellence, and transparency within your team.

My background is in full-stack software engineering, where I have spent over four years building and maintaining web applications. I have strong experience with Laravel, Next.js, React, and Node.js, and I am comfortable working with databases like MySQL and PostgreSQL. I also have hands-on experience with automation, API integration, and deployment workflows using Docker, Nginx, and CI/CD pipelines.

One area that particularly interests me is the technical side of campaign management and analytics. I am comfortable working with scripts, data analysis, and technical implementations. In my professional experience, I have built systems that handle real-time data, role-based access control, and third-party service integration, which gives me a solid foundation for understanding the technical requirements of SEA tools and web analytics platforms.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my technical background and analytical mindset could contribute to your team’s success.

Sincerely,

Md Shahanur Islam Shagor
