I am writing to apply for the Werkstudent Business Automation & AI position at Advertical. Your focus on building internal tools, automations, and AI products within a creative agency environment is exactly the kind of hands-on, impact-driven work I look for.

Through hands-on project development, I have built AI-powered applications that combine automation, API integration, and intelligent workflows. I developed an AI-powered financial app using OpenAI and AWS, where I implemented AI assistants trained on custom datasets, voice-to-text processing via AWS Transcribe, and automated PDF generation. I also built an AI-based real estate platform using Replicate API and OpenAI, with role-based authentication, subscription plans, and Stripe payment integration.

One area that particularly interests me is building internal tools and automation systems that directly improve business efficiency. In my projects, I have worked on automating repetitive tasks, integrating third-party AI services, and developing web applications that streamline complex workflows. I am comfortable working with modern AI tools and APIs, and I enjoy the process of analyzing existing processes and finding smarter ways to automate them.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the opportunity to contribute to Advertical’s automation and AI initiatives. My CV is attached for your review.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
