I am writing to apply for the Replacement for Joe test position at Infinity Group. With a background in full-stack web development and a focus on building scalable, secure applications, I am well positioned to contribute to your team.

My professional experience centers on developing production-grade web applications using Laravel, Next.js, React, and Node.js. I have designed and integrated RESTful APIs, implemented authentication and role-based access control, and optimized database performance through query tuning and caching strategies. These skills allow me to deliver reliable, maintainable systems that meet real business needs.

In my previous role at Explo-IT, I built and deployed full-stack applications with real-time features using WebSockets, integrated third-party services including payment gateways and cloud storage, and managed deployments on Linux servers with Nginx and Docker. I also contributed to responsive, SEO-friendly frontends using Tailwind CSS and modern JavaScript frameworks.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my experience aligns with the needs of Infinity Group. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
