I am writing to apply for the Junior Business Analyst position at Arabian Private Holdings. What drew me to this role is your firm's approach to advisory work: solving critical business problems through rigorous investigation, clear logic, and direct accountability rather than large teams or excessive methodology. That philosophy matches how I prefer to work.

My professional experience has been in software engineering, where I have spent years organizing complex information into clear, actionable structures. In my work as a web developer, I regularly analyzed data flows, identified inefficiencies, and documented system behavior for both technical and non-technical stakeholders. This required the same kind of clarity, precision, and logical thinking that this role demands.

One area that particularly interests me is the focus on corporate governance and operating model efficiency for holding companies and listed corporations. While my background is technical, I have always been curious about how organizations function at a strategic level. I enjoy studying how businesses grow, how decisions are made, and how structure affects performance. I am ready to apply that curiosity to real mandates from day one.

In addition to my analytical skills, I work effectively in remote environments with high autonomy. I communicate clearly in English, both written and verbal, and I am comfortable admitting when a topic is outside my current understanding. I value direct communication and honest critique, which seems to be central to how your firm operates.

I have attached my CV for your review. I would welcome the opportunity to discuss how my research and analytical approach can support your principals and contribute to the quality of independent advice your firm provides.

Sincerely,

Md Shahanur Islam Shagor
