I am writing to apply for the Designer position at Archisearch. While my professional background is in software engineering, I bring a strong sense of visual design and a keen eye for detail, which I have applied consistently in building user interfaces for full-stack applications.

Through hands-on project development, I have used Figma extensively for UI/UX design and prototyping, and I have translated those designs into responsive, polished interfaces using HTML, CSS, Tailwind CSS, and Material UI. I understand the importance of precision in layout, spacing, and visual hierarchy.

One area that particularly interests me is the adaptation of designs to construction-grade detail, as mentioned in the job description. In my work, I have always focused on pixel-perfect implementation and maintaining design consistency across different screen sizes and devices.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my design-oriented engineering skills could contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
