I am writing to apply for the Head of Global Test & Metrology position at CONCAPE. The opportunity to lead a global test lab into a digitally native, data-driven future is compelling, especially given the critical role your components play in semiconductor production.

Through my work in software engineering and AI, I have built systems that bridge the gap between hardware and data. I developed a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker that streams live metrics to the browser. This experience with automation, data pipelines, and real-time analytics directly applies to building a unified data architecture for a global test lab.

One area that particularly interests me is the automation of manual lab processes. I have hands-on experience with Python for data analysis and have built AI-powered object detection systems using YOLOv8 that run on edge devices like the NVIDIA Jetson Nano. I am comfortable working in physical lab environments and understand the importance of connecting test data to real-world performance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in automation, data systems, and cross-site technical work can contribute to CONCAPE’s global test organization.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
